

NSU Quickly

now also available with
three-speed gearbox

The Quickly has proved itself to be easily the world's most popular moped — with its familiar two-speed gearbox. More than 600,000 Quicklys that are used in many different countries are daily proof of this.

But for those riders who wish to start, accelerate and climb even more easily than before, NSU now also make the Quickly with a three-speed gearbox. Those who travel about in cities or hilly regions will be delighted with the Quickly fitted with the three-speed gearbox.

Here are the new transmission ratios of the three-speed Quickly:

1st gear: 2.44
2nd gear: 1.56
3rd gear: 1.0

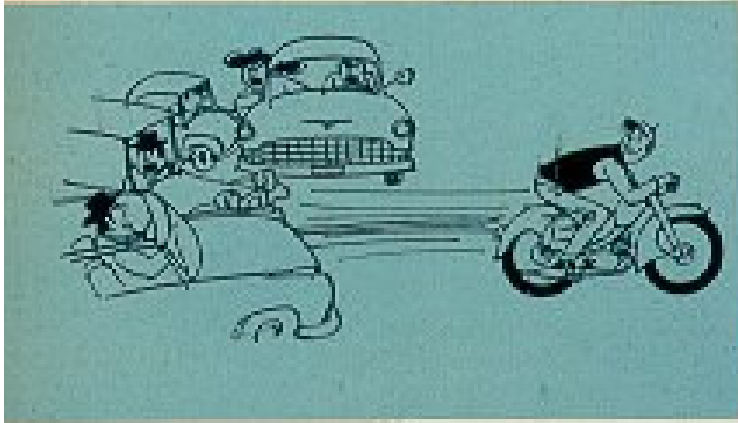

The climbing capacity values

1st gear 22% 2nd gear 12.5%

3rd gear 6.5%

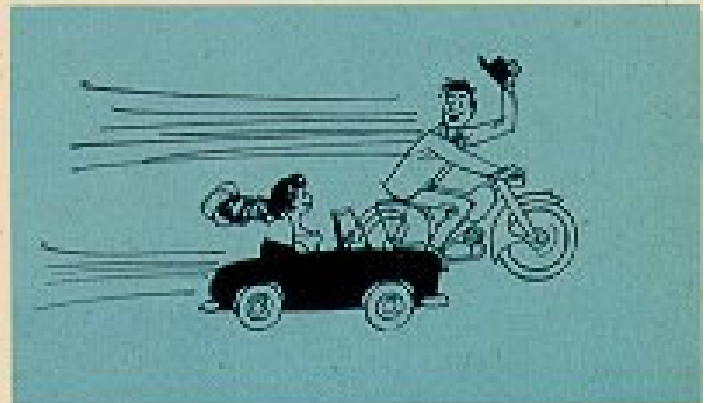

relate to the total weight (weight of machine + 75 kg) and normal height above sea level (760 mm).

The third gear lets the Quickly rider

start quicker

accelerate faster

and climb easier!
